

Tourist Info APP

Problem Statement

1. Create an app that shows a splash screen.
2. It will show a list of news item highlights. In the list row, it shows a title, a brief description, date and an icon which indicates whether the item has been read or not.
3. On clicking the item, Full details of the item can be downloaded and shown to the user.
4. In the Side Navigation drawer, there are different categories of the news. On Clicking on any category, news items of that particular category will get downloaded. Action bar color will get changed for each category.
5. There is a settings page which will show following settings:
 - Font size
 - Show images or not
 - Background dark or light

Technologies to be used - Java and Android

Evaluation Basis

This project will be evaluated on following basis -

- 1) Quality of Java code** - Your application's Java code should be optimized to be readable with proper indentation and comments.
- 2) Intuitive Thinking** - You have to think of all possible data points you can build with given data and include it in your assignment code. Extra score will be given for the same.

- 3) **Originality of code** - Your code will be checked for plagiarism and if it's not original, it will be discarded with a negative skill score.
-

Deliverables from Candidate

- 1) Compressed Folder containing all your code.

Create a folder containing all these deliverables. Compressed all these into a ZIP/RAR format and then upload it in the assignment page.
